## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 47 and 50 has been rejected under 35 U.S.C. 102(b) as being anticipated by Kawakami, 6008992.

Kawakami discloses the invention as shown in the annotated drawing.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 47 has been rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification fails to disclose the combination of an engagement means including a latch means and a locking means for the elected embodiment.

***Allowable Subject Matter***

Claims 1-15 have been allowed. The prior art fails to disclose a fastener having a beam connected to an arm of a flex point, wherein the engagements means is located on one end of the beam on a first side of the beam and the flex point is located on the opposite end of the beam extending from the same first side of the beam. The beam of the fastener is actuated by a material that is adapted to contract when activated.
